

HB SERIES HOSE BEADS

Replacing hoses e.g. standard fuels or even aviation hose can be costly. Fitting hose beads saves the hose from rubbing along the floor/tarmac, minimising wear and abrasion change.

It is common industry practice to fit hose beads on reels or deck hoses of aircraft refuelling or road tanker pumping vehicles. Hose beads assist in manoeuvring hose over the airport apron, while minimising wear and abrasion of the hose cover, and enhancing the visibility of the hose during low light refuelling operations.

HB SERIES HOSE BEADS

Features and Benefits

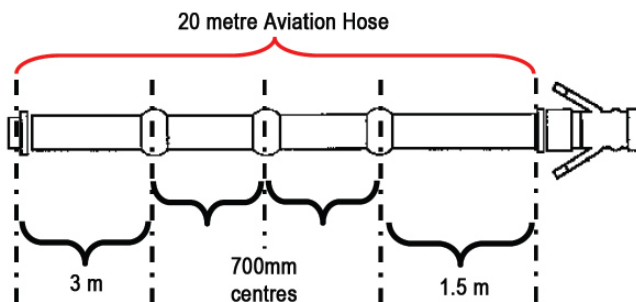

- Increases the life of your hose.
- Allows for relatively effortless manoeuvring of the hose.
- Acts as a marker at night.
- Minimises wear and abrasion of the hose cover.
- The 2-piece yellow plastic beads bolts together around the hose.
- Liquip suggest a bead is fitted every 700mm run of hose.
- Highly break resistant.
- Can be easily installed for use on hose reels.
